

Program Verification (CS1.303)

Spring 2022, IIIT Hyderabad

11 Jan, Tuesday (Lecture 3)

Taught by Atreya Ghosal

Lean

In typed languages (like Haskell and C++, and unlike Racket), every expression has an associated type. A typed language can be statically or dynamically typed. Lean has an extremely rich type system.

There are two types of statements in Lean – commands and expressions. An example of a command is

```
constant a : nat
```
